

*Imagine Your
Servers Here* ►

do you have
**aging server
infrastructure?**

or an
**unreliable
network?**

**designDATA has a solution,
and we call it**

vHOST

What is vHOST?

vHOST is an entirely new paradigm in computing where a bulletproof server farm (vHOST) is purchased as a utility by our clients. With nothing upfront to buy, our clients enjoy a highly redundant, ultra secure, fully managed, 24/7 monitored and maintained datacenter. Put simply – vHOST gets you out of the server room business and onto a platform otherwise out of reach.

IT's all about
network Reliability.

Get out of the server room business with vHOST!

Is vHOST “Cloud Computing”?

Yes – vHOST is private cloud - an extension of traditional IT outsourcing to include pay-as-you-consume datacenter resources, such as servers, storage, bandwidth and security. Our customers enjoy secure, private, highly-redundant, and fully managed servers, without purchasing any equipment ever again.

vHOST Facts

- vHOST is Bullet Proof fortune 500 grade server infrastructure – costing millions to build and maintain. We defray the cost of this infrastructure over many customers, giving you access to an infrastructure otherwise out of reach.
- Always on, 24/7 – guaranteed.
- No hardware to buy, pay only for the resources you consume – yet scale server capacity as needed and on the fly.
- Fully managed, monitored and maintained, 24/7.
- Private fiber optic connections from your office building to the datacenter. 100% secure,
- Ultrafast one gigabit per second speeds. Staff will never know your servers are hosted outside your premises.
- Private environment = full access. You are in control of your data and access to your systems.
- Backed by designDATA – One of the area’s largest IT consulting firms in Washington, DC – with over 30 years’ datacenter experience!

Experience Matters

For many technology companies cloud is a new offering. Not at designDATA. We have over thirty years of corporate datacenter management experience, and over five years in the vHOST cloud model.

About Our Datacenter

- Tier-4 (top tier)
- SAS70 – type II facility.
- 24/7 manned facility
- Dual factor authentication – including biometric scanners and mantraps.
- Redundant power, generators, cooling and internet connectivity.
- Hewlett Packard blade servers and enterprise storage,
- Cisco networking infrastructure and security.

IT's all about
network Reliability.

Are you a vHOST candidate?

Aging server infrastructure? ● Upcoming office move? ● Power ● Cooling ● ISP problems?
Unreliable network infrastructure? ● Security Concerns? ● Downtime?

What if you could eliminate virtually every concern of the entire server lifecycle...acquisition... installation...maintenance...monitoring...repair...patching...and upgrades.

How much time, effort, and resources would this free up?

Are you tired of making significant capital expenditures on IT, only to have to do so again in 36 months?

Since 1979 - providing technology outsourcing services to organizations
in the Washington, DC metropolitan area.
Outsourced IT Consulting Data Center.
